Area under vine: 40 ha

Aspect: South-southwest

Elevation: 231–281 m (Ø 252 m) Gradient: 0–24° (Ø 5°)

Origin:

Winegrowing country: Österreich

Winegrowing area: Weinland

Generic winegrowing regions: Niederösterreich

Specific winegrowing regions/DAC: Wagram

Large collective vineyard site: -

Ortswein («villages» wine): Feuersbrunn

Winegrowing municipality: Grafenwörth

Winegrowing cadastral municipality: Feuersbrunn

Ried (single vineyard): Brenner

Ried within a Ried: -

Description:

Ried Brenner is mid-way up a hillside in the direction of the Hengstberg ridge. The Ried is exposed to the south and has an elevation of roughly 230 to 290 metres. The vineyards, only a small part of which is terraced, predominantly face south. The soil is a calcareous brown earth composed of loess. Loess is a calcareous rock dust (silt) that was blown here from the Alpine region during the cold phases of the Ice Age, at a time when vegetation on the forelands of the glaciers and river plains was sparse. Today, it forms a loamy, sandy and invariably calcareous soil with a well-balanced chemical and mineralogical composition and a good capacity for storing water. Vineyards are recorded at this location in both the Franziszeische Kataster (Austrian cadastral survey) from 1823 and the Administrativkarte (administrative map, 1864–1881). They were already referred to as “Brenner” back then. The name suggests that the area used to be cleared by fire.

Temperature:

The climagraph of **air temperatures** shows the curve of average monthly temperatures for the most recent year of measurement in bold print. For comparative purposes, the fine line also shows the curve of the long-term average temperatures for the last approx. 20 years, as well as the range of deviation for the minimum and maximum average temperatures for each month during this same period (pale shading).

Precipitation:

The current **precipitation** levels for the last year of measurement are shown for each month as dark blue bars on the climagraph. For comparative purposes, the long-term average monthly precipitation vales for the last approx. 20 years are portrayed in a lighter colour; the other two bars show the minimum and maximum amounts of precipitation during the period of measurement.

Sunshine hours:

The diagram shows the average daily sunshine hours for each month of the current year of measurement in orange. The long-term average for the last approx. 20 years is shown in a lighter colour. Alongside this, the long-term minimum and maximum values are shown in yellow. The white areas in the diagram show the maximum possible daily sunshine hours for each month.
