Area under vine: 12 ha

Aspect: South-southwest

Elevation: 187–224 m (Ø 204 m) Gradient: 0–30° (Ø 9°)

Origin:

Winegrowing country: Österreich

Winegrowing area: Weinland

Generic winegrowing regions: Niederösterreich

Specific winegrowing regions/DAC: Wagram

Large collective vineyard site: -

Ortswein («villages» wine): Engelmannsbrunn

Winegrowing municipality: Kirchberg am Wagram

Winegrowing cadastral municipality: Engelmannsbrunn

Ried (single vineyard): Kirchensteig

Ried within a Ried: Bründl Stall

Description:

The vineyards of Ried Bründl Stall lie at an elevation of between approximately 180 and 230 metres, with the majority facing south, although some face south-west to some extent. They are divided into terraces on the Wagram scarp, with those at the top, on the plateau, lying flat. Right at the bottom, the predominantly calcareous, approximately 17-million-year-old clayey silts and sands from the ancient seabed are exposed. These have been covered by lime-deficient to non-calcareous sandy gravels, indicating a former valley floor of the ancient Danube, and these are also found, covered by loess, in the substratum of the plateau. The vineyards are recorded under the name of “Wagram” in both the Franziszeische Kataster (Austrian cadastral survey) from 1823 and the Administrativkarte (administrative map, 1864–1881).

Temperature:

The climagraph of **air temperatures** shows the curve of average monthly temperatures for the most recent year of measurement in bold print. For comparative purposes, the fine line also shows the curve of the long-term average temperatures for the last approx. 20 years, as well as the range of deviation for the minimum and maximum average temperatures for each month during this same period (pale shading).

Precipitation:

The current **precipitation** levels for the last year of measurement are shown for each month as dark blue bars on the climagraph. For comparative purposes, the long-term average monthly precipitation vales for the last approx. 20 years are portrayed in a lighter colour; the other two bars show the minimum and maximum amounts of precipitation during the period of measurement.

Sunshine hours:

The diagram shows the average daily sunshine hours for each month of the current year of measurement in orange. The long-term average for the last approx. 20 years is shown in a lighter colour. Alongside this, the long-term minimum and maximum values are shown in yellow. The white areas in the diagram show the maximum possible daily sunshine hours for each month.
