Area under vine: 9,2 ha

Aspect: South-southwest

Elevation: 247-265 m (Ø 256 m) Gradient: 0-26° (Ø 3°)

**Origin:**

Winegrowing country: Österreich  
 Winegrowing area: Weinland  
 Generic winegrowing regions: Niederösterreich  
 Specific winegrowing regions/DAC: Wagram  
 Large collective vineyard site: -

Ortswein («villages» wine): Oberstockstall  
 Winegrowing municipality: Kirchberg am Wagram  
 Winegrowing cadastral municipality: Oberstockstall  
 Ried (single vineyard): Exlberg  
 Ried within a Ried: -

**Description:**

Ried Exlberg lies to the north of Oberstockstall on the boundary with Otenthal. The vineyards vary in elevation between around 240 and 270 metres and predominantly face south-west. Lime-deficient to non-calcareous sandy gravels lie at the very bottom of the substratum at the edge of the Krampugraben river. These are evidence of a former river valley floor and can also be found in the substratum of the plateau, which is covered with loess and black earth. Loess is a calcareous rock dust (silt) that was blown here from the Alpine region during the cold phases of the Ice Age, at a time when vegetation was sparse. Today, it forms a loamy, sandy soil that is invariably calcareous, with a well-balanced chemical and mineralogical composition and a good capacity for storing water. Grüner Veltliner is the predominant variety grown here, although red wine varieties are planted here, too. The vineyards are recorded in both the Franziszeische Kataster (Austrian cadastral survey) from 1822 and the Administrativkarte (administrative map, 1864–1881). The name of the plot is still in use today. Ried Exlberg's name was previously spelled "Echselberg" or "Exelberg". The word Echsel refers to young oxen that were brought to pasture on this mountain, hence the name of the Ried.

**Climate:**

Seasons ☀ ☁ 🌳 ❄

Temperature 9,8 19,7 9,6 0,3 Ø 9,8 °C

Precipitation 114 220 112 58 Σ 504 mm

## GRAPE VARIETIES

Exlberg (Ried (single vineyard))

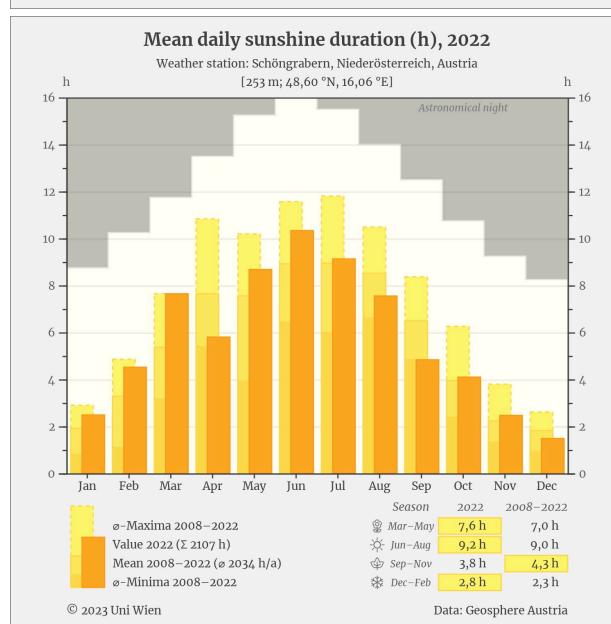

**Temperature:**

The climagraph of **air temperatures** shows the curve of average monthly temperatures for the most recent year of measurement in bold print. For comparative purposes, the fine line also shows the curve of the long-term average temperatures for the last approx. 20 years, as well as the range of deviation for the minimum and maximum average temperatures for each month during this same period (pale shading).

**Precipitation:**

The current **precipitation** levels for the last year of measurement are shown for each month as dark blue bars on the climagraph. For comparative purposes, the long-term average monthly precipitation values for the last approx. 20 years are portrayed in a lighter colour; the other two bars show the minimum and maximum amounts of precipitation during the period of measurement.

**Sunshine hours:**

The diagram shows the average daily sunshine hours for each month of the current year of measurement in orange. The long-term average for the last approx. 20 years is shown in a lighter colour. Alongside this, the long-term minimum and maximum values are shown in yellow. The white areas in the diagram show the maximum possible daily sunshine hours for each month.
